

Incident handler's journal

Instructions

As you continue through this course, you may use this template to record your findings after completing an activity or to take notes on what you've learned about a specific tool or concept. You can also use this journal as a way to log the key takeaways about the different cybersecurity tools or concepts you encounter in this course.

Date: Record the date of the journal entry.	Entry: #1 Record the journal entry number.
Description	Documenting a cybersecurity incident. Provide a brief description about the journal entry.
Tool(s) used	None. List any cybersecurity tools that were used.
The 5 W's	Capture the 5 W's of an incident. • Who caused the incident? An organized group of unethical hackers . • What happened? A ransomware security incident. • When did the incident occur? Tuesday 9:00 a.m. • Where did the incident happen? At a health care company. • Why did the incident happen?

	The incident happened because the attackers were able to gain access into the company's network by using targeted phishing emails, which were sent to several employees of the company. The phishing emails contained a malicious attachment that installed malware on the employee's computer once it was downloaded. Once the attackers gained access, they deployed their ransomware, which encrypted critical files. The company was unable to access critical patient data, causing major disruptions in their business operations. The company was forced to shut down their computer systems and contact several organizations to report the incident and receive technical assistance.
Additional notes	Include any additional thoughts, questions, or findings. 1. How could the health care company prevent an incident like this from occurring again? 2. Should the company pay the ransom to retrieve the decryption key?

Date: Record the date of the journal entry.	Entry: #2 Record the journal entry number.
Description	Analyzing a packet capture file Provide a brief description about the journal entry.

Tool(s) used	For this activity, I used Wireshark to analyze a packet capture file. Wireshark is a network protocol analyzer that uses a graphical user interface. The value of Wireshark in cybersecurity is that it allows security analysts to capture and analyze network traffic. This can help in detecting and investigating malicious activity.
The 5 W's	• Who: N/A • What: N/A • Where: N/A • When: N/A • Why: N/A
Additional notes	I've never used Wireshark before, so I was excited to begin this exercise and analyze a packet capture file. At first glance, the interface was very overwhelming. I can see why it's such a powerful tool for understanding network traffic.

Date: Record the date of the journal entry.	Entry: #3 Record the journal entry number.
Description	Capturing my first packet
Tool(s) used	For this activity, I used tcpdump to capture and analyze network traffic.
The 5 W's	• Who: N/A • What: N/A • Where: N/A • When: N/A • Why: N/A
Additional notes	I'm still new to using the command-line interface, so using it to capture and filter network traffic was a challenge. I got stuck a couple of times because I used the wrong commands. But after carefully following the instructions and

	redoing some steps, I was able to get through this activity and capture network traffic.
--	--

Date: Record the date of the journal entry.	Entry: #4 Record the journal entry number.
Description	Investigate a suspicious file hash
Tool(s) used	For this activity, I used VirusTotal, which is an investigative tool that analyzes files and URLs for malicious content such as viruses, worms, trojans, and more. It's a very helpful tool to use if you want to quickly check if an indicator of compromise like a website or file has been reported as malicious by others in the cybersecurity community. For this activity, I used VirusTotal to analyze a file hash, which was reported as malicious. This incident occurred in the Detection and Analysis phase. The scenario put me in the place of a security analyst at a SOC investigating a suspicious file hash. After the suspicious file was detected by the security systems in place, I had to perform deeper analysis and investigation to determine if the alert signified a real threat.
The 5 W's	• Who: An unknown malicious actor • What: An email sent to an employee contained a malicious file attachment with the SHA-256 file hash of 54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b • Where: An employee's computer at a financial services company • When: At 1:20 p.m., an alert was sent to the organization's SOC after the intrusion detection system detected the file • Why: An employee was able to download and execute a malicious file attachment via e-mail.

Additional notes	How can this incident be prevented in the future? Should we consider improving security awareness training so that employees are careful with what they click on?

Need another journal entry template?

If you want to add more journal entries, please copy one of the tables above and paste it into the template to use for future entries.

Reflections/Notes:

1. Were there any specific activities that were challenging for you? Why or why not?

I really found the activity using tcpdump challenging. I am new to using the command line, and learning the syntax for a tool like tcpdump was a big learning curve. At first, I felt very frustrated because I wasn't getting the right output. I redid the activity and figured out where I went wrong. What I learned from this was to carefully read the instructions and work through the process slowly.

2. Has your understanding of incident detection and response changed after taking this course?

After taking this course, my understanding of incident detection and response has definitely evolved. At the beginning of the course, I had some basic understanding of what detection and response entailed, but I didn't fully understand the complexity involved. As I progressed through the course, I learned about the lifecycle of an incident; the importance of plans, processes, and people; and tools used. Overall, I feel that my understanding has changed, and I am equipped with more knowledge and understanding about incident detection and response.

3. Was there a specific tool or concept that you enjoyed the most? Why?

I really enjoyed learning about network traffic analysis and applying what I learned through network protocol analyzer tools. It was my first time learning about network traffic analysis, so it was both challenging and exciting. I found it really fascinating to be able to use tools to capture network traffic and analyze it in real time. I am definitely more interested in learning more about this topic, and I hope to one day become more proficient in using network protocol analyzer tools
